

AS300 Automatic

Master expands the line of accessories  
for lift and sliding AS300.

The motorization kit of AS300 Automatic include:

- **Lifting motor** allows to activate locking points, and it's incorporated in the rod and positioned under the lock to reduce space like manual version;
- **Sliding motor WISlide 500** connected to the upper rail of the sash, it permits the sliding while opening and closing (it is available in 3 versions covering a width range of sash between 1 and 3 meters);
- A **control Unit** which coordinates the functioning of the two engines.

AS300 system, due to additional roller kit, allows to extend load capacity from 300kg to 400 kg for sash

New **support system** composed by special plastic material of AS300 line, that while sash is closing goes between roller and his rails unloading the weight and avoiding the eventual deformation of bearings

AS300	
Art. 6730M.XX - 6730M.XX - 6730M.XX	Standard closure with lifting motor
Art. 1122.7 - 1122.8 - 1122.9	Kit of motor, belt and cables
Art. 1122.31	Control Unit which coordinates the functioning of the two engines.
