APRO by Master wins an Archiproducts Design Award in the System Components and Materials category

The first major recognition is here for <u>APRO</u>, the automation system for the windows of the future. In the iconic setting of the **Superstudio** in Milan's Via Tortona, **Thursday 16 November** saw the announcement of the winners of the **Archiproducts Design Awards 2023** in a gala evening that brought together the elite of the architecture and design worlds.

An international panel of designers, architects, artists and creatives presented <u>APRO</u> by Master with the ADA 2023 in the System Components and Materials category, which included entries from leading players in the components sector. Receiving the award on behalf of the whole Master technical and product development team were Renato Mastromarino, Product Marketing & Content Manager and Gianvito Mastrorocco, Digital Marketing & Communication Manager, along with Leo De Carlo from MIST studio, who is responsible for APRO's elegant design and minimalist style.

"I'm very proud of the Archiproducts Award we've received for APRO by Master Italy. Working on this project gave me the opportunity to add beautiful design to a highly technical product; this makes APRO an item which, in addition to carrying out its specific function elegantly, also demonstrates that Italian style is successful even in fields that seem far apart", said designer **Leo De Carlo** of MIST, who took care of the aesthetics of the design.

"Master has always manufactured accessories for doors and windows - very technical products by definition. With APRO I really wanted cross-fertilisation with professional designers so that we could start introducing design concepts into the ideation and development processes of our technical solutions.

MASTER ITALY Srl s.p.37 Conversano-Castiglione km. 0.570 Z.I. Conversano (Bari) Italy Postcode 112 Tel: +39 080 4959823 VAT No. 07780290727 www.masteritaly.com - ufficiostampa@masteritaly.com Since 1986, Master Group has been designing and producing accessories and components for aluminium doors and windows, a process involving research, investment, examination of the culture of aluminium, and an intense focus on the quality of materials, technologies that can ensure excellent performance in finished goods, the identification of new market demands and constant customer satisfaction.

This is because I'm a strong believer in cross-fertilisation and constant improvement, in order to achieve increasingly high standards", in the words of **Lorenzo Lafronza**, Technical and BU OEM Director at Master.

This important recognition for APRO in an international competition like Archiproducts Design Award reaffirms the positive reactions to the product line from markets all over the world, for its response to the need to turn any window into an **integrated element of home automation**.
